

# Containers form a Groupoid CwF

Stefania Damato

Thorsten Altenkirch

TYPES 2026

# Motivation

---

- Provide semantics for Quotient Inductive-Inductive Types (QIITs) via containers.

# Motivation

- Provide semantics for Quotient Inductive-Inductive Types (QIITs) via containers.
- Approach: Restrict existing QIIT semantics.

QUOTIENT INDUCTIVE-INDUCTIVE TYPES

QUOTIENT INDUCTIVE-INDUCTIVE TYPES

THORSTEN ALTENKIRCH, PAOLO CAPRIOTTI, GABE DIJKSTRA, NICOLAI KRAUS,  
AND FREDRIK NORDVALL FORSBERG

~~~~~> Can we represent any statement in type theory as some container?

# Background

---

- Containers a.k.a. polynomial functors.

set of shapes  $\leftarrow S \triangleleft P \rightarrow$  family of positions

# Background

- Containers a.k.a. polynomial functors.

set of shapes  $\leftarrow S \triangleleft P \rightarrow$  family of positions

- Category with families (CwF): A notion of model of type theory.

# Background

- Containers a.k.a. polynomial functors.  
 set of shapes  $\leftarrow S \triangleleft P \rightarrow$  family of positions
- Category with families (CwF): A notion of model of type theory.
- Groupoid CwF: A generalisation of CwF where types can be h-groupoids.

## Polynomials and Models of Type Theory

Tamara von Glehn

Magdalene College

University of Cambridge

This dissertation is submitted for the degree of

*Doctor of Philosophy*

September 2014

PhD thesis

# The container model

- contexts  $(S_\Gamma : \text{Set}) \triangleleft (P_\Gamma : S_\Gamma \rightarrow \text{Set})$
- types in  $\Gamma$   $(S_A : \text{Set}) \triangleleft (P_A : S_A \rightarrow \int \llbracket \Gamma \rrbracket)$
- type substitution “pullback  $\triangleleft$  pushout”
- terms of  $A$   $\int_X (x_\Gamma : \llbracket \Gamma \rrbracket X) \rightarrow \llbracket A \rrbracket (X, x_\Gamma)$
- context extension  $\Gamma \triangleright A$  components of  $A$

# Coherence issues

---

In a CwF, types should form an h-set.

# Coherence issues

In a CWF, types should form an h-set.

 Set model:
 

|                   |                                    |
|-------------------|------------------------------------|
| contexts          | $\Gamma: \text{Set}$               |
| types in $\Gamma$ | $A: \Gamma \rightarrow \text{Set}$ |

# Coherence issues

In a CwF, types should form an h-set.

▲ Set model: contexts  $\Gamma$        $\Gamma: \text{Set}$   
 types in  $\Gamma$        $A: \Gamma \rightarrow \text{Set}$

▲ Presheaf model: contexts  $\Gamma$        $\Gamma: \mathcal{C}^{\text{op}} \rightarrow \text{Set}$   
 types in  $\Gamma$        $A: \prod_{x: \mathcal{C}} \Gamma(x) \rightarrow \text{Set}$

# Coherence issues

In a CwF, types should form an h-set.

▲ Set model: contexts  $\Gamma$        $\Gamma: \text{Set}$   
                                          types in  $\Gamma$        $A: \Gamma \rightarrow \text{Set}$

▲ Presheaf model: contexts  $\Gamma$        $\Gamma: \mathcal{C}^{\text{op}} \rightarrow \text{Set}$   
                                          types in  $\Gamma$        $A: \prod_{x: \mathcal{C}} \Gamma(x) \rightarrow \text{Set}$

Without UIP, types are not h-sets.

# Coherence issues

In a CwF, types should form an h-set.

⚠ Container model:

contexts  $(S_\Gamma : \text{Set}) \triangleleft (P_\Gamma : S_\Gamma \rightarrow \text{Set})$

types in  $\Gamma$   $(S_A : \text{Set}) \triangleleft (P_A : S_A \rightarrow \mathbb{I}\Gamma\mathbb{I})$

Without UIP, types are not h-sets.

# Groupoid CwFs

---

✓ Types are now h-groupoids.

# Groupoid CwFs

✓ Types are now h-groupoids.

But we have to prove extra coherences!

$$\begin{array}{ccc}
 & A[\text{id}_\Gamma][\gamma] & \\
 \swarrow [\circ] \text{Ty} & & \searrow \text{ap}_{-[\gamma]}[\text{id}] \text{Ty} \\
 A[\text{id}_\Gamma \circ \gamma] & \xrightarrow{\text{ap}_{A[-]} \text{idlc}} & A[\gamma]
 \end{array}$$

$$\begin{array}{ccc}
 & A[\gamma][\text{id}_\Gamma] & \\
 \swarrow [\circ] \text{Ty} & & \searrow [\text{id}] \text{Ty} \\
 A[\gamma \circ \text{id}_\Gamma] & \xrightarrow{\text{ap}_{A[-]} \text{idrc}} & A[\gamma]
 \end{array}$$

$$\begin{array}{ccccc}
 & & A[\sigma][\delta][\gamma] & & \\
 & \swarrow [\circ] \text{Ty} & & \searrow \text{ap}_{-[\sigma]}[\circ] \text{Ty} & \\
 A[\sigma][\delta \circ \gamma] & & & & A[\sigma \circ \delta][\gamma] \\
 \swarrow [\circ] \text{Ty} & & & & \swarrow [\circ] \text{Ty} \\
 A[\sigma \circ (\delta \circ \gamma)] & \xrightarrow{\text{ap}_{A[-]} \text{assoc}_C^{-1}} & & & A[(\sigma \circ \delta) \circ \gamma]
 \end{array}$$

# Our contribution

---

7

- Proved the coherence laws in a cubical setting.
- Fully formalised the container groupoid  $CwF$  in Cubical Agda.

# Proof sketch: Left identity coherence

To prove:

$$\begin{array}{ccc}
 & A[\text{id}_\Gamma][\gamma] & \\
 \swarrow [\circ] \text{Ty} & & \searrow \text{ap}_{-\gamma}[\text{id}] \text{Ty} \\
 A[\text{id}_\Gamma \circ \gamma] & \xrightarrow{\text{ap}_{A[-]} \text{id}c} & A[\gamma]
 \end{array}$$

Thanks  
Axel!

# Proof sketch: Left identity coherence

To prove:

$$\begin{array}{ccc}
 & A[\text{id}_\Gamma][\gamma] & \\
 [\circ] \text{Ty} \swarrow & & \searrow \text{ap}_{-\gamma}[\text{id}] \text{Ty} \\
 A[\text{id}_\Gamma \circ \gamma] & \xrightarrow{\text{ap}_{A[-]} \text{id} \text{c}} & A[\gamma]
 \end{array}$$

Thanks  
Axel!

Step 1: Write it  
as a square.

$$\begin{array}{ccc}
 A[\text{id}_\Gamma \circ \gamma] & \xrightarrow{\text{ap}_{A[-]} \text{id} \text{c}} & A[\gamma] \\
 [\circ] \text{Ty} \uparrow\uparrow & & \uparrow\uparrow \text{refl} \\
 A[\text{id}_\Gamma][\gamma] & \xrightarrow{\text{ap}_{-\gamma}[\text{id}] \text{Ty}} & A[\gamma]
 \end{array}$$

# Proof sketch: Left identity coherence<sup>9</sup>

Step 2: Rewrite the square as

$$\begin{array}{ccc} A[\gamma] & \xrightarrow{\text{uaGenCon } \text{id}_{\simeq\text{GenCon}}} & A[\gamma] \\ \text{uaGenCon } (\dots[\circ] \text{Ty-eq}) \Uparrow & & \Uparrow \text{uaGenCon } \text{id}_{\simeq\text{GenCon}} \\ A[\text{id}_{\Gamma}][\gamma] & \xrightarrow{\text{uaGenCon } (\dots[\text{id}] \text{Ty-eq})} & A[\gamma] \end{array}$$

where

$$\text{uaGenCon}: A \simeq_{\text{GenCon}} B \rightarrow A \equiv B$$

# Proof sketch: Left identity coherence<sup>9</sup>

Step 2: Rewrite the square as

$$\begin{array}{ccc} A[\gamma] & \xrightarrow{\text{uaGenCon } \text{id}_{\simeq\text{GenCon}}} & A[\gamma] \\ \text{uaGenCon } (\dots[\circ] \text{Ty-eq}) \uparrow\uparrow & & \uparrow\uparrow \text{uaGenCon } \text{id}_{\simeq\text{GenCon}} \\ A[\text{id}_{\Gamma}][\gamma] & \xrightarrow{\text{uaGenCon } (\dots[\text{id}] \text{Ty-eq})} & A[\gamma] \end{array}$$

where

$$\text{uaGenCon}: A \simeq_{\text{GenCon}} B \rightarrow A \equiv B$$

Step 3: Prove commutativity of the  $\simeq_{\text{GenCon}}$  square.

# Proof sketch: Left identity coherence

Step 4: Obtain the original square

$$\begin{array}{ccc}
 A[id_{\Gamma} \circ \gamma] & \xrightarrow{ap_{A[-]} id_{\mathbf{c}}} & A[\gamma] \\
 [o] Ty \uparrow \uparrow & & \uparrow \uparrow refl \\
 A[id_{\Gamma}][\gamma] & \xrightarrow{ap_{-[\gamma]}[id] Ty} & A[\gamma]
 \end{array}$$

by massaging equalities.

E.g. Lemma: `uaGenCon id≈GenCon ≡ refl.`

# Type formers

---

$\Sigma$ -types : Similar to presheaf model.

- $\llbracket A \rrbracket : \int \llbracket \Gamma \rrbracket \rightarrow \text{Set}$
- $\llbracket B \rrbracket : \int \llbracket \Gamma \triangleright A \rrbracket \rightarrow \text{Set}$
- $\llbracket \Sigma A B \rrbracket : \int \llbracket \Gamma \rrbracket \rightarrow \text{Set}$

# Type formers

$\Sigma$ -types: Similar to presheaf model.

$$\cdot \llbracket A \rrbracket : \int \llbracket \Gamma \rrbracket \rightarrow \text{Set}$$

$$\cdot \llbracket B \rrbracket : \int \llbracket \Gamma \triangleright A \rrbracket \rightarrow \text{Set}$$

$$\cdot \llbracket \Sigma A B \rrbracket : \int \llbracket \Gamma \rrbracket \rightarrow \text{Set}$$

$$\llbracket \Sigma A B \rrbracket (X, x_\Gamma) :=$$

$$\Sigma (x_A : \llbracket A \rrbracket (X, x_\Gamma)) (\llbracket B \rrbracket (X, x_\Gamma, x_A))$$

# Type formers

---

$\Pi$ -types : Still an open problem.

# Type formers

---

IT-types : Still an open problem.

- Previous approach - unclear how to write result as a container.

# Type formers

---

$\Pi$ -types : Still an open problem.

- Previous approach - unclear how to write result as a container.
- We think they do not exist in general.

# Conclusion & Future work

- Fully formalised container GCWF in

Cubical Agda :

[github.com/stefaniatadama/container-gcwf](https://github.com/stefaniatadama/container-gcwf)

- Type formers :  $\Pi$ ,  $\cup$ ,  $\text{Id}$ .
- Containerified QIIT semantics.

Thank you!
